

British Swimming Open Water Swimming Officials

South West Region recruitment campaign

Do you want to officiate at events in the open air, rather than being cooped up in a steamy swimming pool? You can enjoy the benefits of sun, sea and sand whilst judging a swimming event?

Open Water swimming is now an Olympic discipline held over a distance of 10km. The first event was held in Beijing in 2008. At the London Olympics the event was held in the Serpentine with a capacity crowd. Since being added to the Olympic events open water swimming has become increasingly popular and more events are being held in all areas of the country; some mass participation events are now attracting many thousands of entrants. Open Water swimming like other disciplines needs officials to ensure events run smoothly and safely so the ASA has a programme to develop officials to perform at county, regional and national events throughout the summer season.

ASA SWR are running development courses for existing and new officials during the 2016 season. See below for details.

Open Water Officials' development courses 2016

Saturday 28th May - Cheddar Pool, classroom and pool sessions

Saturday 4th June—Weymouth, practical sessions on beach and boat.

Learn about officiating at Open Water events, update on rules from the 2013 FINA Congress. Practical experience in boats and with swimmers. Plus "Spot the Foul". Then officiate at:

**The South West Region Open Water Championships on Saturday
25 June 2016**

British Swimming Open Water Level 1 and Level 2 qualification courses can also be arranged to meet demand

What does an Open Water official do:

Timekeeper:

You start your watch on the starter's signal as you would in the pool, however at the end of the race you will be expected to take the time of every swimmer in your race. At bigger events you will be given a watch that incorporates a printer, so there is no need to write down all the separate times. At local events however you will use an ordinary stopwatch but be sure to check it can take enough splits.

Judge:

All open water events are freestyle, so there will be no stroke judging, what you will be looking for is fouling, and safety of the swimmers

Finish judge:

As a finish judge you will be asked to record the order of all the swimmers as they touch the finish. Usually these are spread out and easy to judge, however sometimes you can have four, five or more swimmers all coming in together racing to finish. Then you have to very quick to read the numbers written on their shoulders and hands. If you are lucky there may be a video camera recording the finish to help you sort out the finish order.

Starter:

You will be starting a lot of swimmers all at once. You will have a flag and an air horn, so that the swimmers can have no doubt when the signal is given. Sometimes the swimmers will be on a platform for the start and will dive in, other times they will start as a big bunch all together in the water.

Referee:

You will be controlling all of the officials mainly using a radio. Your principal concern is safety. The weather can cause problems, water temperature, safety boat cover and of course ensuring swimmers are playing fair and not crowding together and causing danger to other swimmers.

There are other specialised officials such as **Safety Officer**, and **Course Officer** that you do not see in pool swimming but you will start with timekeeping and judging.

During the summer there will be courses for both Level 1 and level 2 Open Water officials; why not enrol? More information including application forms online at:
